

Passive fire protection without  
compromising architectural design

NO COMPROMISE

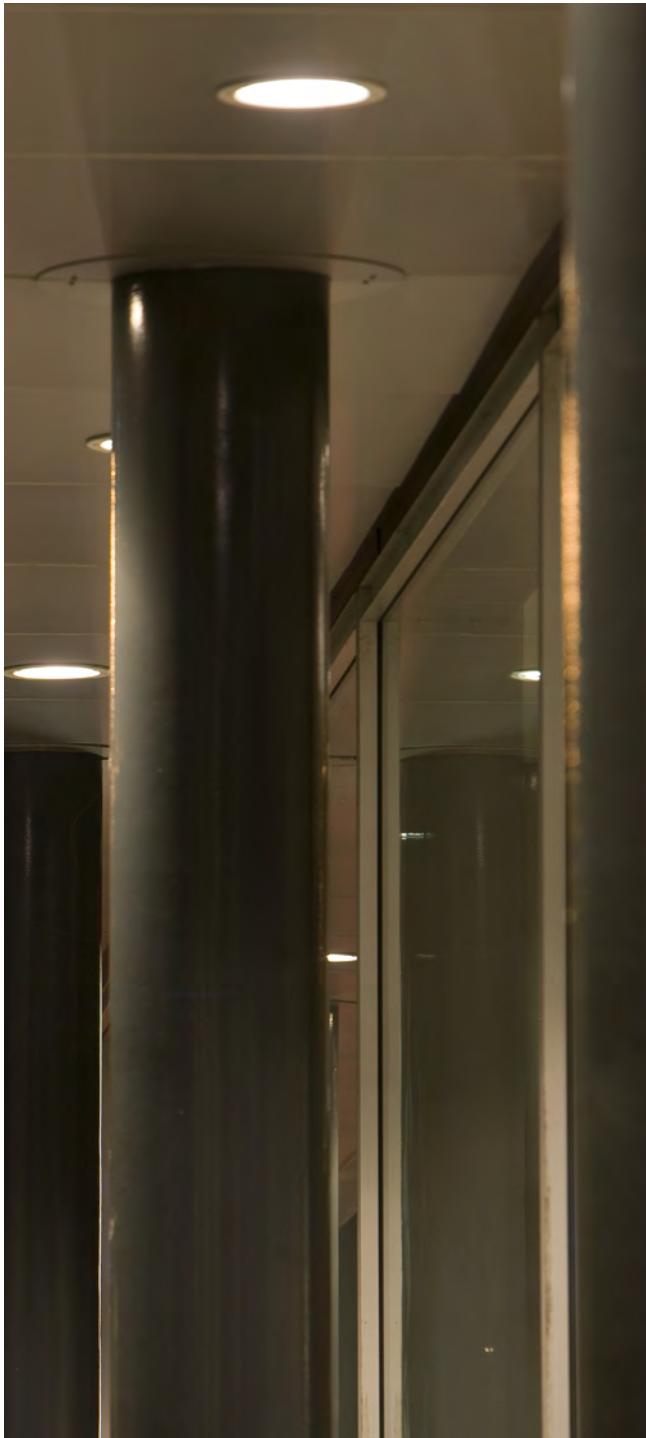

# durability

## Fire Protection Without Compromise

Epoxy intumescent fire protection was developed for the off shore industry to protect against fuel fires and has been proven for over 20 years in extreme North Sea conditions. Interact, with the collaboration of the raw material manufacturers, have developed a system which takes advantage of this highly durable product. A full range of cladding systems provide secondary cladding to universal columns and direct cladding to steel hollow sections without any compromise in aesthetics and integrity.

# LONG LASTING

the **Interact Structural Fire Protection** products are highly durable and so are perfect for external and internal use and ideal for areas of high human

traffic such as shopping malls, airports and hospitals.

# aesthetics
